**Brizaga Ready to Assist with Challenges of Sea Level Rise**

*A consulting company focused on adaptation and resilience opens doors*

**Fort Lauderdale, FL** – Today, Brizaga, Inc., a consulting company focused on adaptation, resilience and sea level rise, opened its doors in Fort Lauderdale, Florida. Brizaga, Inc. was founded by two friends of nearly two decades, an oceanographer & meteorologist and a coastal & civil engineer, dedicated to helping individuals, businesses, and governments understand and begin to address the effects of a changing environment, including sea level rise. We specialize in outreach & advocacy, resilience & adaptation, management & strategy, and science communication. Our team has experience assessing vulnerability and risk, planning adaptation strategy, and public outreach associated with assessments, planning, and implementation. We distill complex scientific topics for policy-makers and the general public. With 20 years of political experience, 15 years of environmental science work, and 5 years of engineering consulting experience, our team is ready to help you create a better tomorrow.

“The effects of sea level rise are visible in communities across the United States today,” **said Alec Bogdanoff, Ph.D., President and Co-Founder of Brizaga**, “and the need for adaptation action is already here. Brizaga was founded to assist individuals, businesses, and government on their adaptation journey to create more resilient communities.”

“We are proud to start the company in our hometown, which is ground zero for the effects of sea level rise,” **Vice President and Co-Founder Michael Antinelli, PE, CFM explained**. “It is our mission to make this community a better and more resilient place for decades to come.”
